CAMELLIA JAPONICA

FIELD GROWN

These Camellias have been grown, since liners, in full sun under irrigation. In most grades, especially 12 to 18 inch and up, they are much heavier and much more compact than similar grades grown in slat houses. Full sun tends to make Camellias branch early, and grow bushy. They are not to be compared with slat house plants.

*Figures after variety denote the size or sizes available in that particular variety.

Suwannee River is ideal where a low foundation plant is needed such as here.

SUWANNEE RIVER IS GOING PLACES!

WIDE ACCEPTANCE INDICATED BY
REPORTS OF HARDINESS IN SOUTH,
SOUTHWEST, THE EASTERN SHORE
TO LONG ISLAND AND THE PACIFIC
COAST!

Specimen Suwannee River 2 years in the field.

SUWANNEE RIVER HAS EVERYTHING!

- low spreading habit . . .
- compact, dark green foliage . . .
- flowers but little or no berries . . .
- freedom from white fly . . .
- little pruning requirements . . .
- lack of fussiness about soils . . .
- ease of transplanting . . .
- high resistance to nematode . . .
- drought resistance . . .
- hardy to Long Island . . .

WHOLESALE prices are quoted to established nurseries and licensed dealers who are purchasing for resale. Prices are F.O.B. origin and packing charged at cost.

PUBLIC INSTITUTIONS are defined as public or semi-public bodies, buying in quantity for their own use and not for resale, such as cemeteries, universities and colleges, city, state, and federal government agencies, etc. Where delivered price is requested any packing and shipping charges should be added.

RETAIL prices are to the buying public.

To protect you and your customers, each Suwannee River Ligustrum plant will carry this tag!

PLANT
PATENT
NO. 1402

Suwannee River Ligustrum will stay low around this screened porch.

Reports On Suwannee River Tests

The following excerpts are quotations from cooperators testing Suwannee River Ligustrum in various sections of the United States:

ALABAMA: "Last year the water supply in Auburn was extremely low, and we were not allowed to use any for shrubbery, lawns, etc. This plant suffered rather severely from lack of water. Then came the freeze in late March with a temperature of 17 degrees here at Auburn. For a time I thought this plant was completely killed. However, in the last three weeks it has begun to show new leaves and there is every indication that it will recover.

"I was well pleased with the appearance of this plant until such extremely adverse conditions practically stopped its growth. In my opinion this should be a very satisfactory shrub for foundation planting." May 1955.

DISTRICT OF COLUMBIA: "Although it was not possible for us to water as regularly as we should have during last summer's extreme drought, your plants showed no deleterious effects from lack of water. I do not think that we will have any trouble bringing them through any droughts that we may experience in this area.

"This past winter was the coldest winter we have had in seven years. On two occasions the temperature went as low as 7 degrees F. We had severe winter burning on many broad leave evergreens and some on the plants of 'Suwannee River'. The leaf burning on your **Ligustrum** did not show up until early March, and at that time it appeared as numerous small spots over the leaves. With the coming of warm weather and new foliage, the worst leaves dropped off. At no time however did the plants lose all their leaves or appear completely brown. All plants are growing well now and seem not to have suffered any actual killing back of their stems.

"As for my impression of 'Suwannee River' as a broad-leaved evergreen for this area, I would say that it looks very promising. Certainly it has stood up much better than **Ligustrum japonicum** this winter at the Arboretum. If our winters do not get any colder than the past one I cannot see why it should not be satisfactory for this and similar climatic areas." May 1955.

DELAWARE: "Both plants are in good condition and the variety seems to be hardy in both the southern and northern part of the state.

"Some winter injury was observed on both plants probably due to sun and wind burn, but this is common to all of our lucidum privet during severe winter weather in this area. I believe this would make an attractive and useful landscape plant for Delaware." May 1955.

LOUISIANA: "The **Suwannee River Ligustrum** is now in full bloom and looks good . . . It withstood the drought and came through in good condition.

"As a low growing shrub, especially for use around industrial areas, it seems that the **Suwannee River Ligustrum** would be an excellent choice." May 1955.

MARYLAND: "The 'Suwannee River Ligustrum' plants you sent for field testing over a year ago have just gone through an unusually severe winter for this part of the country. Several days we had temperatures two or three degrees below zero.

"The plants did take a bit of abuse, but now that they are getting spring rains and warmth, I can report that they appear to be doing very well." April 1955.

MISSISSIPPI: ". . . This plant made fairly normal growth and withstood the drought as well as any other plants, particularly compared to the common ligustrum. As indicated from your description of this variety, it is a dwarf type in that it is still not more than two feet in height. This plant, along with a common ligustrum, had started vigorous new growth before the severe freeze occurred on March 26 and 27. All of this tender new growth was killed and the old leaves were damaged to some extent. Except for the tender new growth, no damage has been apparent

on the last year's or older wood and the plant is making normal new growth at this time. Our temperature during this unprecedented late freeze on March 27, was officially recorded at 20 degrees Fahrenheit and the temperature remained below freezing for more than twenty-four hours." May 1955.

LONG ISLAND, NEW YORK: "The three **Suwannee River Ligustrums** were placed in different places so that we would have some basis from which to judge.

- (1) "One was placed in a place protected from all winds and received only about 3 or 4 hours sun a day. This plant appears to be in good shape and is already setting out new leaves.
- (2) "A second was placed in an area where it had protection from wind on three sides and received 5 to 6 hours of sun a day. This did not do as well and showed about 1-4 of the leaves with wind burning. New leaves are coming out in profusion though.
- (3) "The third was placed in full sun and completely exposed to the winds. This is in the worst condition with $\frac{1}{2}$ to $\frac{2}{3}$ of the leaves showing wind burn, but there are new leaves appearing. The new leaves are not as prolific as in the other two plants.

"They certainly show promise but I think it will take another 2 or 3 years in order to judge them well." May 1955.

OREGON: ". . . The plant looks perfectly healthy. It has not made a very large amount of growth, and that is as we want it, since it is designed for the low, modern type of architecture.

"I think this plant has a definite place and will stand up along with our azaleas, rhododendrons, skimmia, daphnes and camellias which do so well here." May 1955.

PENNSYLVANIA: ". . . Both are in good condition; the tips of most of the upper leaves are browned, but there is plenty of new growth, two to three inches long.

"Both are planted in protected spots, one more so than the other and that one started into growth a little earlier.

"As to weather conditions; last summer was hot and dry and we did much watering. The ligustrums received extra waterings. The first part of the winter was mild, but the whole month of February was very cold with little snow. In my opinion the ligustrums came thru exceptionally well." May 1955.

TEXAS: "The plants are certainly nice and should please our most exacting customers." October 1954.

Foundation planting of Suwannee River around
an office building.

INDICA
AZALEAS FIELD GROWN

GROUP 1 Varieties:

Pres. Clay 8-18", Formosa 8-18", Elegans 8-18",
Vitatta Fortunei 8-18".

(Figures after the variety name indicate the size or
sizes available in that variety).

Our Azaleas are not lath house grown, but
field grown, under irrigation. They are
considerably more compact and heavier
branched than are lath house grown
plants. They are also tougher, and will
stand up better under heel ground con-
ditions than will slat house grown plants.

All Azaleas are quoted balled but not burlapped.

GRADE	10	100
8 to 12 inch	\$ 4.50	\$ 30.00
12 to 15 inch	5.50	40.00
15 to 18 inch	7.25	60.00

GROUP 2 VARIETIES

Fielder's White 8-18", Fisher Pink 8-15", Dixie 8-
24", George Franc 8-18", George L. Taber 8-18",
Glory of Sunninghill 8-18", Lawsal 8-15", Macran-
tha 8-15", Pride of Dorking 8-18", Pride of Mobile
8-18", Swan 8-18", Vervaene 8-15".

GRADE	10	100
6 to 9 inch	\$ 4.50	\$ 30.00
9 to 12 inch	5.50	40.00
12 to 15 inch	7.25	60.00
15 to 18 inch	10.00	80.00

SOUTHERN CHARM. The new Pink Formosa.
Very good.

GRADE	10	100
8 to 12 inch	\$ 6.00	\$ 50.00
12 to 15 inch	8.50	75.00
15 to 18 inch	12.50	100.00

Coniferous Evergreens

MEMORANDUM

Fish While You Wait

**BUY A BUSH
AND
BOAT A BASS!**

This irrigation lake supplies not only water for irrigation, but is well-stocked with Bream and Bass.

You're cordially invited to try your luck. Many of our customers bring along their fishing tackle, and while we dig and load their orders, they spend the time fishing.

TERMS OF SALE

TERMS: Cash, unless credit arrangements are made before shipment.

GUARANTEE: We guarantee our stock to be well grown, true to name, and properly packed. In no case shall our liability exceed the original invoice value. Our responsibility ceases on delivery to the transportation company.

SHIPPING: Please give full shipping instructions with each order; otherwise we shall use our best judgment.

PACKING CHARGES at cost will be added to these prices except bare root stock, which is packed free when cash accompanies order.

All prices are f.o.b. Cairo, Georgia.

This list cancels previous quotations and is subject to change without notice.
